Preface
To advance our understanding of information systems (IS), it is necessary to conduct relevant and rigorous IS research. IS research, in turn, is built on a foundation of strong and robust theory. Indeed, the IS field has a long and rich tradition of developing and appropriating theories to examine central disciplinary themes, such as the IS life cycle and IS business value, along with a host of social and political factors. The ISWorld wiki “Theories Used in IS Research.” (TUISR) lists 87 such theories and models. While this site is a valuable resource for the field, much more could be assembled to aid IS researchers in using theories to explain and predict how information systems can be used within today’s digital society.

In our own careers, we have found it to be a major challenge to identify appropriate theories for our work, and even harder to fully understand the theories that we encounter. We would encounter theories we find interesting, but the papers where we found them provide an incomplete account or a superficial explanation of what the theory was about, or how it could be used. It was this problem of theory identification and comprehension that led us to create this book. We wanted to produce a collection of papers about theories that could be used by IS researchers as a starting point for their work. This collection would act like a one-stop-shop for IS theory. We already had the TUISR wiki that provided basic information on theory; but with this book, we wanted to provide more depth and insight into the theories that populated our field.

We believe the lack of a comprehensive source of information on theory poses special problems for researchers. Due to a deficiency of experience within a new area, it may not be easy to fully comprehend and use a new theory in an appropriate manner. Furthermore, it is sometimes difficult for researchers to determine which particular theory, out of the vast number available, may be appropriate in a research context.

We felt a literary and meta-analytic collection of IS theories would not only provide a significant contribution to IS knowledge, but would also be a valuable aid to IS researchers, practitioners and students.

The overall mission of this book is to provide a comprehensive understanding and coverage of the various theories and models used in IS research. Specifically, it aims to focus on the following key objectives:

- To describe the various theories and models applicable to studying IS/IT management issues
- To outline and describe, for each of the various theories and models, independent and dependent constructs, reference discipline/originating area, originating author(s), seminal articles, level of analysis (i.e. firm, individual, industry) and links with other theories
- To provide a critical review/meta-analysis of IS/IT management articles that have used a particular theory/model
- To discuss how a theory can be used to better understand how information systems can be effectively deployed in today’s digital world

This book contributes to our understanding of a number of theories and models. The theoretical contribution of this book is that it analyzes and synthesizes the relevant literature in order to enhance knowledge of IS theories and models from various perspectives. To cater to the information needs of a diverse spectrum of readers, this book is structured into two volumes, with each volume further broken down into two sections.
The first section of Volume 1 presents detailed descriptions of a set of theories centred around the IS life cycle, including:

- DeLone and McLean's Success Model
- Technology Acceptance Model
- Unified Theory of Acceptance and Use of Technology
- User Resistance Theories
- Task-Technology Fit Theory
- Process Virtualization Theory
- Theory of Deferred Action

The second section of Volume 1 contains strategic and economic theories, including:

- Resource-Based View
- Theory of Slack Resources
- Portfolio Theory
- Theory of the Lemon Markets
- Technology–Organization–Environment Framework
- Contingency Theory
- Porter’s Competitive Forces Model
- Business Value of IT
- Diffusion of Innovations
- Punctuated Equilibrium Theory
- Discrepancy Theory Models
- Institutional Theory
- A Multilevel Social Network Perspective
- Expectation Confirmation Theory
- Stakeholder Theory

The first section of Volume II concerns socio-psychological theories. These include:

- Personal Construct Theory
- Psychological Ownership and the Individual Appropriation of Technology
- Transactive Memory
- Language-Action Approach
- Organizational Information Processing Theory
- Organizational Learning, Absorptive Capacity and the Power of Knowledge
- Actor-Network Theory
- Structuration Theory
- Social Shaping of Technology Theory
- An IT-Innovation Framework
- Yield Shift Theory of Satisfaction
- Theory of Planned Behavior
- An Interpretation of Key IS Theoretical Frameworks Using Social Cognitive Theory

The second section of Volume II deals with methodological theories. These include:

- Critical Realism
- Grounded Theory and Information Systems: Are We Missing the Point?
- Developing Theories in Information Systems Research: The Grounded Theory Method Applied
- Narrative Inquiry
- Mikropolis Model
- Inquiring Systems
- Information Systems Deployment as an Activity System
Together, these theories provide a rich tapestry of knowledge around the use of theory in IS research. Since most of these theories are from contributing disciplines, they provide a window into the world of external thought leadership. Considering the breadth and depth of the content, we hope this book will become a trusted resource for readers wishing to learn more about the various theories and models applicable to IS research, as well as those interested in finding out when and how to apply these theories and models to investigate diverse research issues.

We sincerely hope this book will provide a positive contribution to the area of Information Systems. To make further research progress and improvement in the understanding of theories and models, we welcome all feedback and comments about this book from readers. Comments and constructive suggestions can be sent to the Editors care of Springer, USA, at the address provided at the beginning of the book.

Contents

1 The Updated DeLone and McLean Model of Information Systems Success ................................................................. 1
   Nils Urbach and Benjamin Müller
   1.1 Introduction .............................................................................. 2
   1.2 Development of the D&M IS Success Model ......................... 3
   1.3 Constructs and Measures ....................................................... 4
   1.3.1 System Quality ................................................................. 4
   1.3.2 Information Quality ......................................................... 5
   1.3.3 Service Quality ............................................................... 5
   1.3.4 Intention to Use/Use ......................................................... 6
   1.3.5 User Satisfaction ............................................................ 7
   1.3.6 Net Benefits .................................................................. 7
   1.4 Construct Interrelations ........................................................ 8
   1.4.1 System Use ....................................................................... 9
   1.4.2 User Satisfaction ............................................................. 10
   1.4.3 Net Benefits .................................................................. 11
   1.5 Existing Research on IS Success .......................................... 11
   1.6 Conclusion ........................................................................... 13
   References .................................................................................. 14

2 If We Build It They Will Come? The Technology Acceptance Model .......................................................... 19
   Joseph Bradley
   2.1 Introduction ............................................................................. 20
   2.2 Literature Review ................................................................. 21
   2.2.1 Expectancy-Value Theory .................................................. 21
   2.2.2 Technology Acceptance Model ......................................... 23
   2.2.2.1 TAM Variables ...................................................... 24
   2.2.2.2 Impact of TAM ........................................................ 25
   2.2.2.3 Types of Information Systems Examined .................. 25
   2.2.2.4 External Variables Tested ......................................... 25
   2.2.2.5 TAM Publications .................................................. 26
   2.2.2.6 Characteristics of Research Subjects ......................... 26
   2.2.2.7 Major Limitations of the Model ............................... 27
   2.2.2.8 Most Published Authors ......................................... 27
   2.2.2.9 Recent TAM Research .......................................... 27
   2.2.2.10 TAM Model Elaborations ....................................... 28
   2.2.2.11 TAM2 .................................................................. 28
   2.2.2.12 Unified Theory of Acceptance and Use of Technology (UTAUT) .................................................. 29
   2.2.2.13 TAM and Task-Technology Fit Model ....................... 30
   2.2.2.14 TAM3 .................................................................. 31
   2.3 Future of the Technology Acceptance Model ........................ 32
   2.4 Conclusions ........................................................................... 33
3 A Bibliometric Analysis of Articles Citing the Unified Theory of Acceptance and Use of Technology .................................................. 37
Michael D. Williams, Nripendra P. Rana, and Yogesh K. Dwivedi
3.1 Introduction ........................................ 38
3.2 Methodology ........................................ 39
3.3 Findings............................................. 40
3.3.1 Demographic Data: Citations by Year .......... 40
3.3.2 Demographic Data: Citations by Journal/Source .... 40
3.3.3 Demographic Data: Most Cited Citations .......... 41
3.3.4 Analysis and Systematic Review of Articles Citing
the UTAUT Originating Article .............................. 42
3.3.4.1 Citations with No Use of UTAUT .............. 42
3.3.4.2 Citations with Use of UTAUT with Different
Research Methods ........................................... 43
3.3.4.3 Citations with Partial Use of UTAUT .......... 43
3.3.4.4 Citations with Complete Use of UTAUT ..... 43
3.3.5 IS Research Topics and Types of IS Examined ....... 46
3.3.5.1 Keyword Analysis ............................... 46
3.3.5.2 Types of IS Investigated ......................... 49
3.3.6 Methodological Analysis .......................... 49
3.3.6.1 Research Methods .................................. 50
3.3.6.2 Types of Users ...................................... 51
3.3.6.3 Sample Size ........................................ 52
3.3.7 Theoretical Analysis .............................. 52
3.3.7.1 External Variables Analysis ...................... 53
3.3.7.2 External Theories Analysis ...................... 54
3.3.7.3 Relationships of External Variables
with UTAUT Constructs ................................. 54
3.4 Discussion ............................................ 55
3.5 Conclusion ........................................... 57

4 Why Do People Reject Technologies:
A Review of User Resistance Theories .................................. 63
Sven Laumer and Andreas Eckhardt
4.1 Introduction ........................................ 64
4.2 Resistance, Rejection, and Non-Adoption ............ 65
4.3 User Resistance Theories ............................. 67
4.3.1 Multilevel Model of Resistance to Information
Technology Implementation .............................. 69
4.3.2 Power, Politics, and MIS Implementation .......... 71
4.3.3 A Model of Users’ Perspective on Change .......... 72
4.3.4 Passive Resistance Misuse .......................... 73
4.3.5 An Attributional Explanation of Individual Resistance ...... 75
4.3.6 Inhibitors and Enablers as Dual Factor Concepts
in Technology Usage ....................................... 77
4.3.7 Physicians’ Resistance Toward Health-Care
Information Technology ................................. 79
4.3.8 Analyzing Workplace Referents’ Social Influence
on IT Non-adoption ........................................ 80
4.3.9 Investigating User Resistance to Information Systems
Implementation: A Status Quo Bias Perspective .......... 80
4.4 Outlook .............................................. 82
References .................................................. 84

5 Task-Technology Fit Theory: A Survey and Synopsis
of the Literature ........................................... 87
Brent Furneaux
5.1 Introduction ........................................ 88
5.2 The Theory ........................................... 88
5.3 Literature Survey and Synopsis ......................... 90

18.1 Introduction ........................................................................... 356
18.2 Origins of Discrepancy-Based Satisfaction ......................... 357
18.2.1 Discrepancy Theory Overview ........................................ 358
18.2.2 Management Studies of Job Satisfaction ....................... 359
18.2.3 Marketing Studies of Consumer Satisfaction ................. 360
18.3 Satisfaction in IS Research .................................................... 362
18.3.1 User Satisfaction with Information Systems .................. 363
18.3.2 Job Satisfaction in the Information Systems Literature ................................................................. 367
18.3.3 Discrepancy Theory Formation of Satisfaction .......... 367
18.4 Methodological Issues in Applying Discrepancy Theories ...... 371
18.4.1 Choosing the Components ............................................. 371
18.4.2 Measuring Discrepancy ................................................ 372
18.4.3 Choosing the Shape ....................................................... 374
18.4.4 Analyzing the Relationship .......................................... 374
18.5 Conclusions ........................................................................... 375
References ................................................................................................ 376

19 Institutional Change and Green IS: Towards Problem-Driven,
Mechanism-Based Explanations ................................................. 383
Tom Butler
19.1 Introduction ........................................................................... 384
19.1.1 Green IT and Green IS Defined ..................................... 385
19.2 Institutional Theory ............................................................... 386
19.2.1 Mechanisms-Based Explanations from Institutional
20 A Multilevel Social Network Perspective on IT Adoption .......................... 409
Heidi Tscherning
20.1 Introduction ................................................................................... 410
20.2 Multilevel Research on IT Adoption ............................................. 412
20.2.1 Levels of Analysis:
Society – Industries – Organizations ........................................ 414
20.2.2 Levels of Analysis: Industries – Organizations .................. 414
20.2.3 Levels of Analysis: Organizations – Groups/Teams .......... 415
20.2.4 Levels of Analysis: Groups – Individuals ............................ 415
20.2.5 Levels of Analysis: Organizations – Individuals .............. 415
20.3 Multilevel Framework for Technology Adoption ......................... 416
20.3.1 Individual Level ...................................................................... 418
20.3.1.1 Attributes and Beliefs ........................................... 419
20.3.1.2 Intentions ................................................................ 419
20.3.1.3 Adoption Behavior ............................................... 420
20.3.2 Network Level ........................................................................ 420
20.3.2.1 Discourse .................................................................. 420
20.3.2.2 Diffusion .................................................................... 421
20.3.3 Individual Level and Network Level Interaction ............... 422
20.4 Social Network Theories ............................................................... 423
20.4.1 Social Network Analysis ....................................................... 423
20.4.2 Homophily ........................................................................... 425
20.4.3 Self-Interest and Collective Action ....................................... 426
20.4.4 Contagion ............................................................................ 428
20.5 Discussion ..................................................................................... 429
20.5.1 Homophily ........................................................................... 430
20.5.2 Self-Interest and Collective Action ....................................... 431
20.5.3 Contagion ............................................................................ 432
20.5.4 Social Network Analysis ....................................................... 432
20.6 Limitations and Future Research .................................................. 432
20.7 Conclusion .................................................................................... 433
