Workflow Mining:
Which processes can be rediscovered?
W.M.P. van der Aalst, A.J.M.M. Weijters, and L. Maruster

Abstract. Contemporary workflow management systems are driven by explicit process models, i.e., a completely specified workflow design is required in order to enact a given workflow process. Creating a workflow design is a complicated time-consuming process and typically there are discrepancies between the actual workflow processes and the processes as perceived by the management. Therefore, we have developed techniques for (re)discovering workflow models. Starting point for such techniques are so-called "workflow logs" containing information about the workflow process as it is actually being executed. Unfortunately, it is not possible to (re)discover every workflow process. In this paper we explore the class of workflow processes which can be discovered. The theoretical results presented in this paper demonstrate that most practical workflow processes fit into this class. The tool MiMo, also presented in this paper,

2. Gestion des Bibliothèques

2.1. Interface principale

2.2. Importation des pdf

Plusieurs solutions :

- Clic and drop du gestionnaire de fichier vers Qiqqa
- Menu Ajouter le PDF ou les références :
 - Ajout dossier
 - Import d'un autre logiciel de référence :
 - Zotero
 - EndNote
 - Mendeley
 - JabRef
 - Bibtex
